Hrishikesh Tonge

Consultant | Data Analytics/Engineering
hrishikeshtonge@gmail.com | 9004597959 | MUMBAI, MH, IN
Linkedin | **HackerRank**

Education

Center for Development of Advanced Computing — Mumbai
Post Graduation Diploma Big Data Analytics — March 2023 - September 2023

A C PATIL COLLEGE OF ENGG. — MUMBAI
B.E Computer Engineering — August 2018 - May 2022

Ramnarain Ruia Jr. College — Mumbai
HSC Science — July 2016 - February 2018

Experience

Ernst & Young India | **Consultant** — Mumbai | September 2024 - Present

1. Develop and maintain dbt models on Snowflake for pharma Chemistry, Manufacturing & Controls data, translating scientist requirements into governed, production-ready changes.
2. Engineered scalable PySpark exception-detection pipelines to ingest, process, and analyze complex ERP transaction data (SAP/Oracle) across automotive and agro-chemical manufacturing domains. Modularized reusable, parameterized PySpark functions to encode complex audit and risk algorithmsincluding three-way matching, Segregation of Duties (SoD) conflicts, and Benford's Law anomalieswhile embedding data quality checks to ensure end-to-end data integrity across high-volume datasets.
3. Built a PySpark/SQL pipeline on Databricks integrating external SIAM steel-rate indices with internal procurement data to automate price-variance analysis and customer settlement calculations for an automotive manufacturing client.
4. Designed an end-to-end HR analytics pipeline (headcount, attrition, R&R, L&D, recruitment, manpower cost, compliance) on Databricks using PySpark, REST APIs, and Power BI; diagnosed a snapshot-only data model blocking SPLY/YoY trend reporting and implemented historical snapshot accumulation to fix it, while resolving schema-inference bugs in the ingestion notebooks.
5. Built Snowflake/dbt pipelines to compute multiple financial and operational KPIs (inventory ageing, CEBITDA, revenue) for a global manufacturing client on large-scale SAP data, using incremental dbt models and scheduled backfills to resolve recurring performance bottlenecks like cross-join timeouts.
6. Built a RAG pipeline (LangChain, FAISS, Azure OpenAI) for PDF-based audit report analysis, automating extraction of Key Risk Indicators (KRIs) from unstructured audit documentation into structured, queryable outputs.

Square yards | **Data Engineer** — Mumbai | October 2023 - September 2024

- Engineered scalable data widgets for property pricing, bank mortgages, and consumer behavior across major Indian markets, aggregating large-scale datasets to power analytical reporting using Scala.

LTI | **Engineer Cloud and Infrastructure** — Mumbai | June 2022 - January 2023

Skills

Programming Languages:	Python, Scala, PySpark, SQL, SnowPark
Libraries/Frameworks:	Apache Spark, scikit-learn, Pandas, NumPy, dbt
Tools / Platforms:	Databricks, Azure, Google Big Query, Power Bi, Qlik Sense, DBeaver, Snowflake
Databases:	MySQL, MongoDB, MS SQL Server

Certifications

- DataBricks Gen AI Associate - **DataBricks**

Honors & Awards

- EY: Client Extraordinaire
